

MINUTES
Weekly RHEA Client Registry Call
November 2, 2012

Agenda:

1. AOB
2. Short Term Security Fixes
3. Prioritizing Track 1 Work
4. Point of Care Workflow Issue

Discussion Topics:

1. Short Term Security Fixes
 - a. Ryan – put out outline security plan for all registries and have been getting some feedback on some changes. Three main tasks. One, infrastructure tasks Jembi & NDC working on. Two, general server tasks Jembi working on. Three, any application specific tasks, backup script. Web services are secure. Keep enabling HT to PS for the future.
 - b. Odysseas – I think your security plan for the CR looks good and meet some suggestions I made earlier. Access for the US would be nice, have a VM for us to come in to help support.
 - c. Odysseas – Will document and prototype one port open between network access to CR on external network to help restrict access but give US access.
 - d. Shaun – Who will change the admin password on the application?
 - e. Ryan – I will change that and give everyone the password.
2. Prioritizing Track 1 Work
 - a. Shaun – Need to run what we declare as high priority tasks by Richard. Security is one. Making sure CR and SHR identities are synced.
 - b. Wayne – Would like to get the MoH lead on these calls so they know what is going on and provide feedback. Would like to document post September issues over the next few calls.
 - c. Shaun – Would be helpful document where we are at with the golden record and other parking lot items from pre September.
 - d. Lorinne – On these calls we can make high priority improvements while we are waiting on feedback from Richard.
 - e. Shaun – Security and synchronization seem to be the top two priorities.
 - f. Wayne – Jembi has the capacity to talk about designs but may not be able to action those discussions at this time.
 - g. Shaun – Overview on this topic is to awaiting feedback on the priorities from Richard. Security is a top priority and we need to continue working on this. Synchronization is another high priority and we will continue dialogue on design but need to wait until the budget is complete to take action.
3. Point of Care Workflow Issue
 - a. Wayne – Rwanda training data set to use for development and testing of POC work. Hoping to work on data in country on testing server to test workflows. Purely demographic data, Ubedehe data.
 - b. Odysseas – Can create smaller data set with a lot of the same circumstances as the real data for testing that Jembi might do.
 - c. Wayne – Use case performance testing
 - d. Wayne – Dawn expressed concern about the quality of the Ubedehe data. POC data side has been hit less than 50%.
 - e. Shaun – We need to look into why we are not getting the hit rate we would like to locally. Not sure why we would not be getting what we expect. Is there documentation on how data entered currently is leveraged in OpenMRS? May be able to just look at query strategy and figure out what is going on. Then come up with empirical second approach.
4. Call Schedule
 - a. Have this talk via email.

Meeting Concluded at 9:05am.

Attendees:

Name	Organization	Name	Organization	Name	Organization
Rhonwyn Cornell	Jembi	Odysseas Pentakalos	SYSNET	Shaun Grannis	Regenstrief
Ryan Crichton	Jembi	Wayne Naidoo	Jembi	Lorinne Banister	Regenstrief
		Jamie Thomas	Regenstrief
